- Bakersfield College

06-current  Pursuing Certification of Completion C#

- LaunchCode's LC101, St. Louis, MO

---

## PROJECTS:

11/18  **Tech Console App**

- An app that allows user to browse and search listings of open jobs by employer.
- It was a C# project assignment for LaunchCode so I put some of the code in, which was the code that would enable all jobs to print when user selects that option.
- Added case sensitive methods

10/18  **Blogz Web App**

- A web app that allows users to post Blogs
- I coded the app in Python and set up a database with MAMP software.
- I implemented a previous code from a similar app and modified it so that users had to login to view and post blogs

09/18  **Web Caesar App**

- Created a web app encrypts messages
- Converted a basic character rotation app in Python by adding a new methods that would execute an encryption key
